# Requirement

pynvme builds your own tests.

# Changes in SSD

- SSD has been changing for the decade:
  - media:
    - SLC, MLC, TLC, QLC
    - 2D => 3D
    - PCM, 3D-Xpoint...
  - host:
    - PATA, SATA, PCIe/NVMe
    - open-channel
    - up coming: ZNS, KV, ... ?
  - DRAM
  - form factor
- Agile: good for the constant change and uncertainty

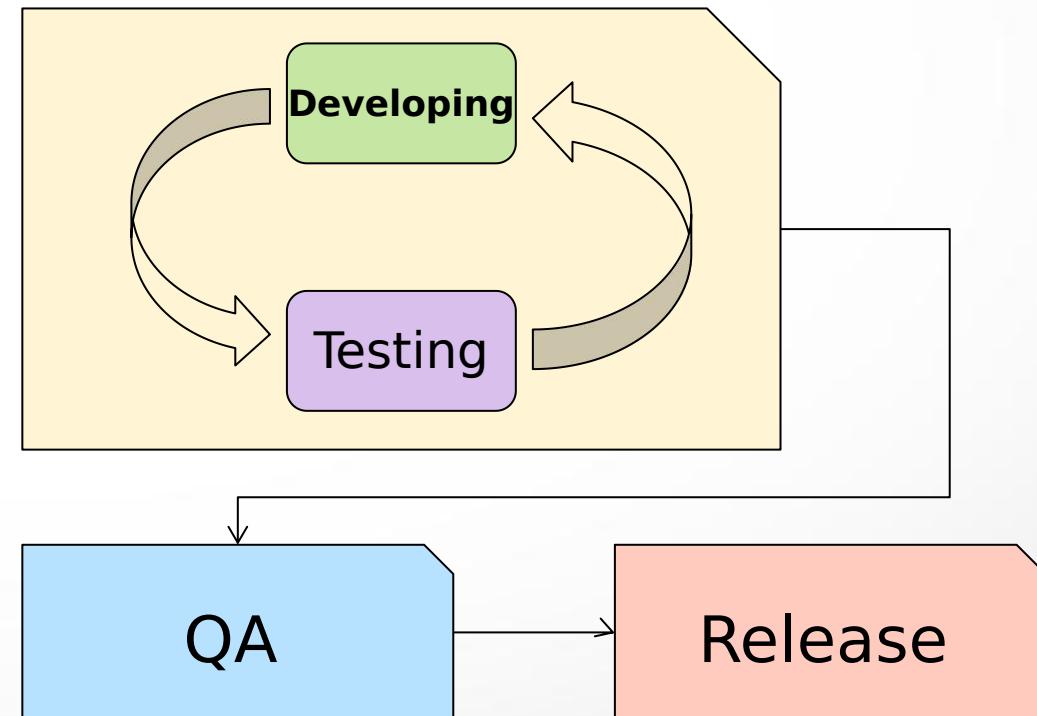

# Agile Testing

- Developing and Testing are done interactively and iteratively.
- QA verifies the product of Dev/Test for customers.
- Testing and QA are different. Testing tools and QA tools are also different.
- Most available tools in the market are QA tools.

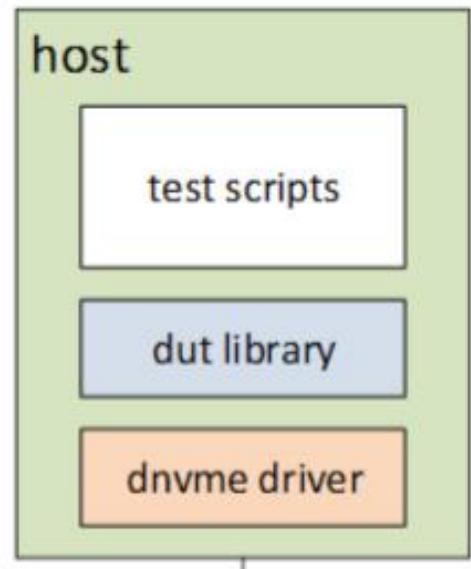

<b>test</b>	<b>QA</b>
for developer	for customer
before checkin	before release
automatic	manual
white-box	black-box
short	long
changing	stable

# Experience in a Startup: dnvme

- dnvme: @2015
  - wrap with python in userspace
  - functional tests
  - integrated with Jenkins
  - firmware engineers develop scripts
  - PASS IOL test on the first try

- challenges:
  - low performance:
    - IOPS, latency, consistency
    - test efficiency
    - stress tests
  - maintainness: kernel module
  - function coverage: PRP, ...
  - GPL License
- dnvme is good at NVMe test, but in-efficient on SSD test.

# Born for NVMe: SPDK

- SPDK is open from 2016
  - super high performance: [10M IOPS](#)
  - user space application
  - based on DPDK environment, which abstracts low-level resources
    - PCIe
    - memory
- meet challenges:
  - low performance:
    - IOPS, latency, consistency
    - test efficiency
    - stress tests
  - maintainness: kernel module
  - function coverage: PRP, ...
  - BSD License

# SDC2020

A screenshot of a Google Chrome browser window showing the SDC 2020 website. The title bar shows multiple tabs including "SDC 2020 |". The address bar shows the URL "storagedeveloper2020.org/nvme". The page header includes the SDC 20 logo and navigation links for LOBBY, AGENDA, SPONSORS, SPEAKERS, BOFS, SMB3 IO LAB, PMEM BOOTCAMP, and CONNECT AT SDC.

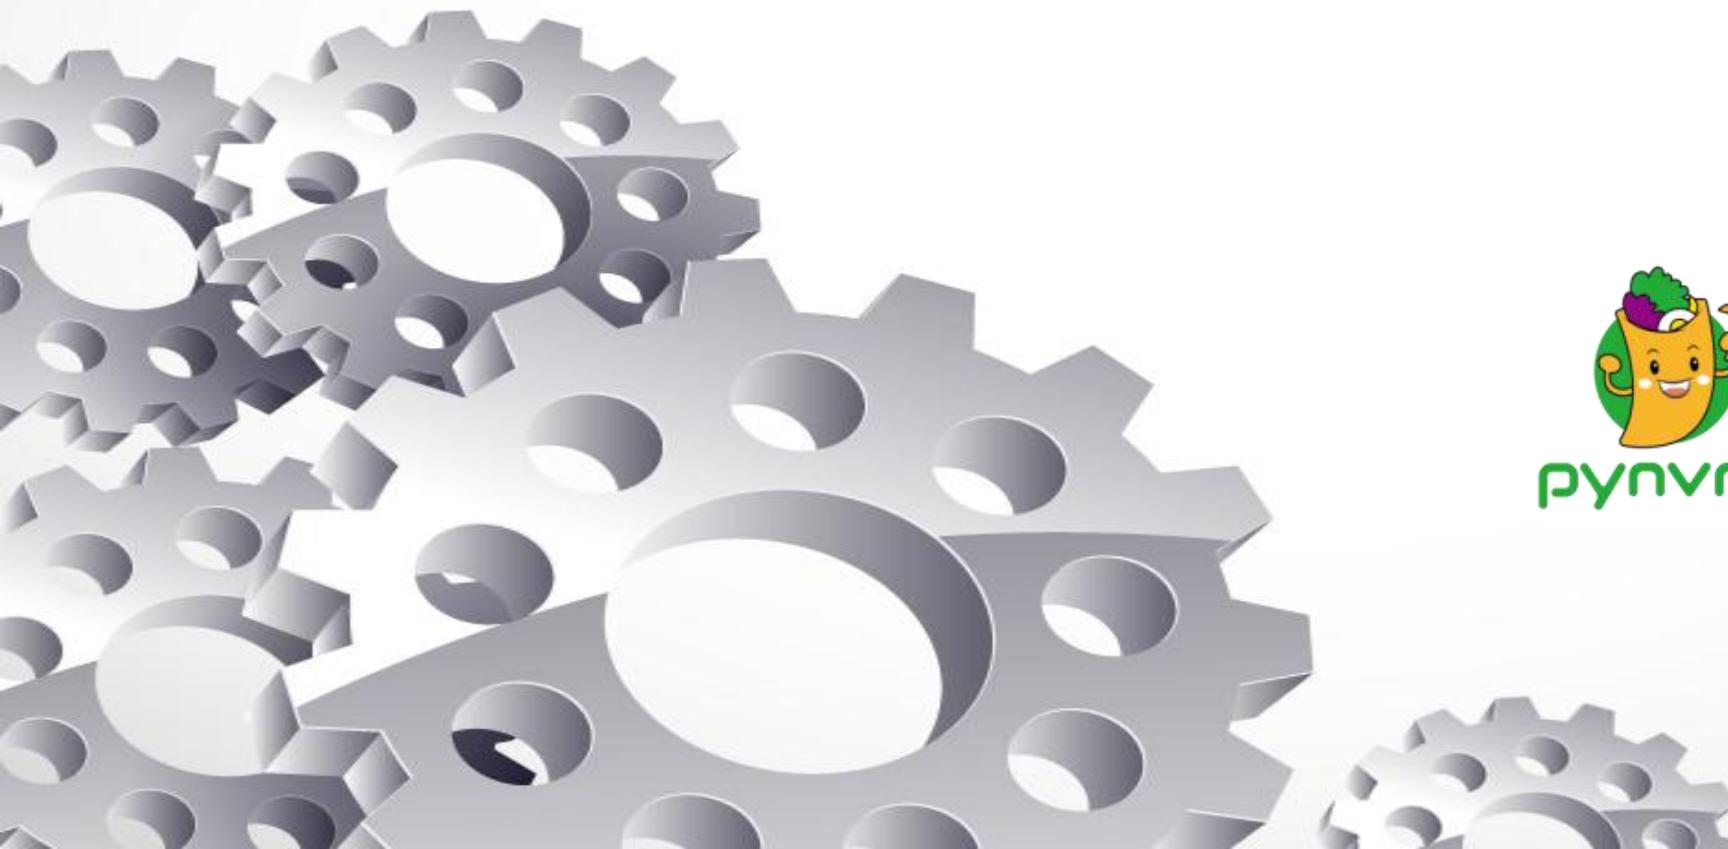

**pynvme: an open, fast and extensible NVMe SSD test tool**

Crane Chu  
GENG YUN Technology Pte Ltd

- Python tool for testing your NVMe design

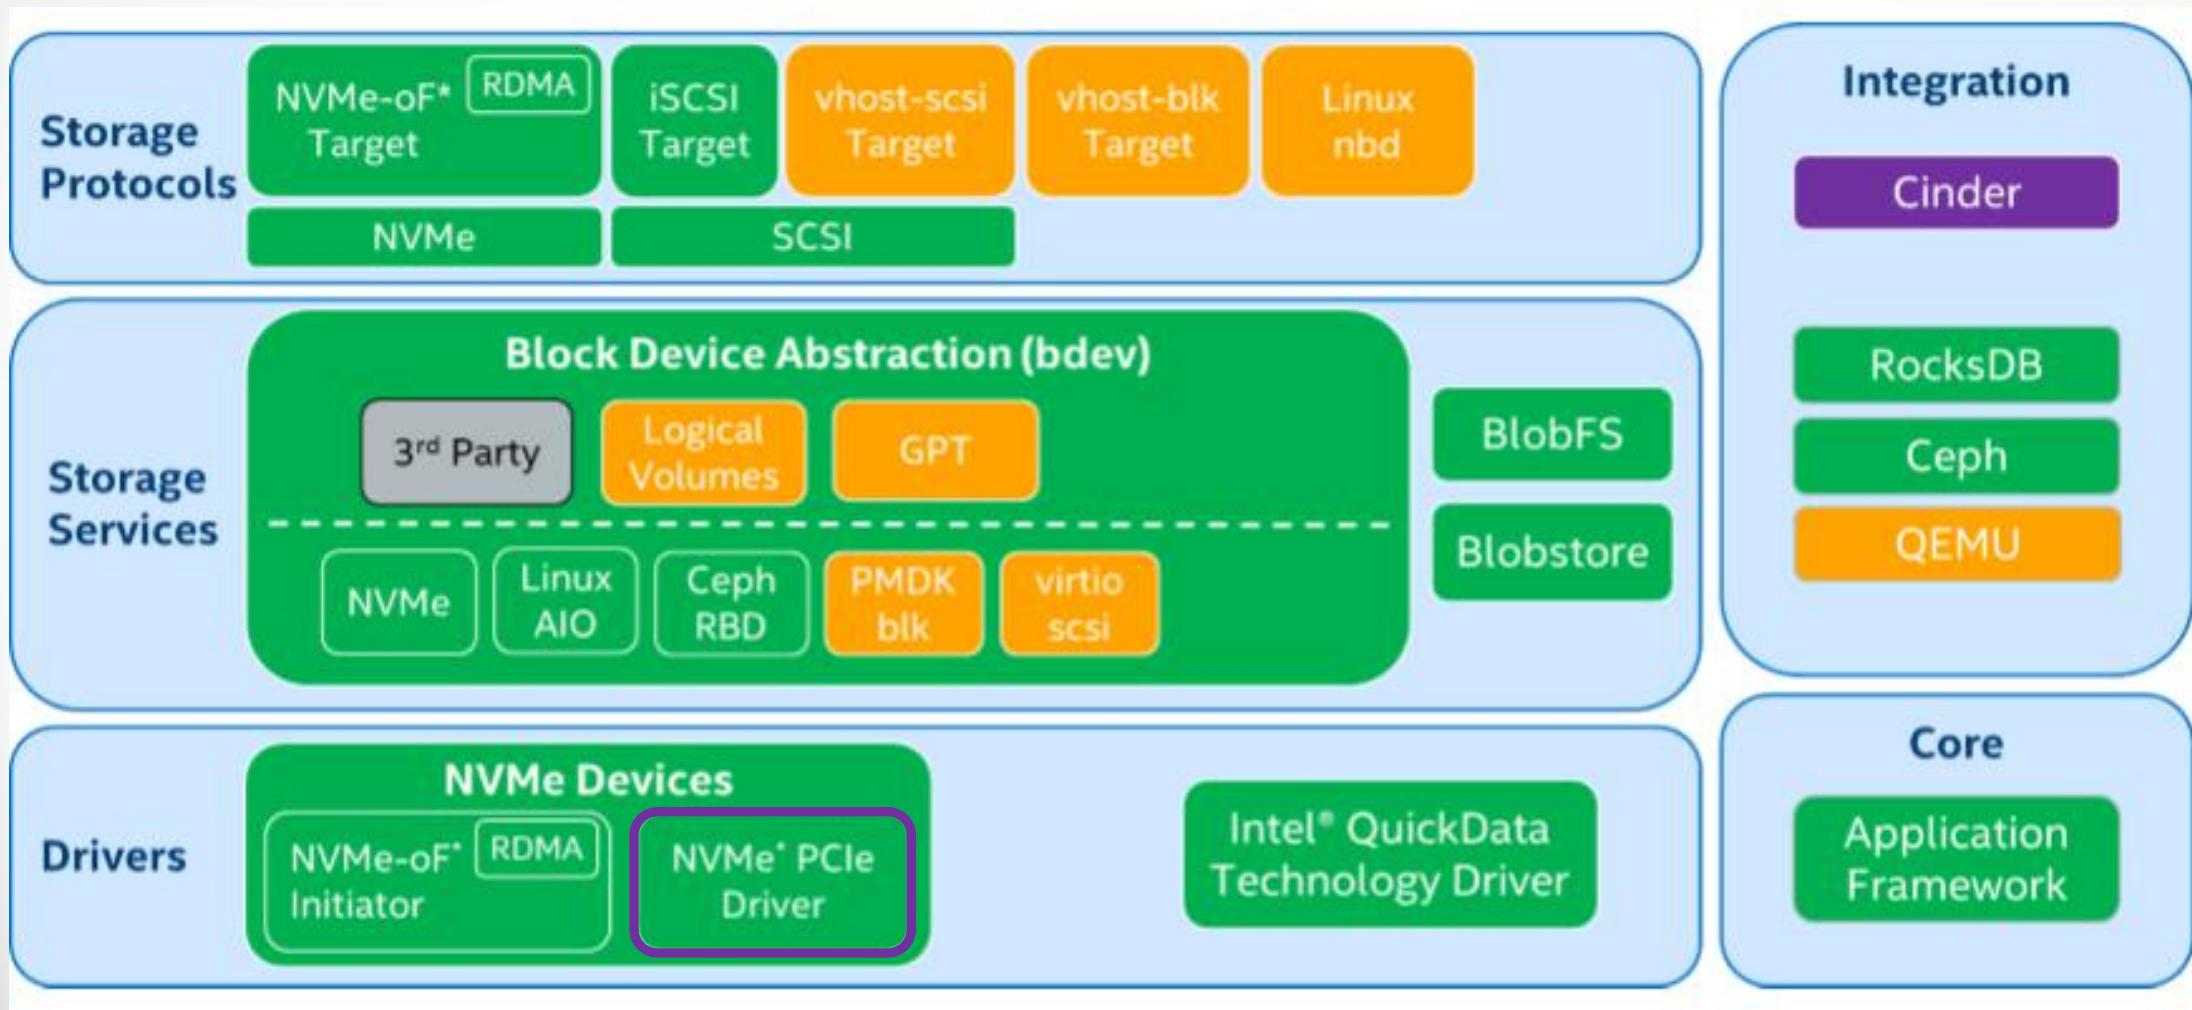

<https://www.youtube.com/watch?v=Yoru7vzVyL8>

# Design

pynvme builds your own tests.

# SPDK

# SPDK/DPDK

- Moving all of the necessary drivers into userspace, which avoids syscalls and enables zero-copy access from the application.
- Polling hardware for completions instead of relying on interrupts, which lowers both total latency and latency variance.
- Avoiding all locks in the I/O path, instead relying on message passing.

# Test Scripts: dirty power cycle

- [PCIe Card Module](#)
- [Torridon Interface Kit](#)
- poweroff process
  - poweroff when ioworker is alive
  - remove device from system
- poweron process
  - poweron
  - remove kernel driver
  - rescan device
  - nvme initialization

# Features

- access PCI configuration space
- access NVMe registers in BAR space
- send any NVMe admin/IO commands
- support callback functions for NVMe commands
- support MSI/MSIx interrupts
- transparent checksum verification on every LBA
- generates IO workload of high performance and low latency
- support multiple namespaces
- support multiple tests on different controllers
- integrate with the test framework pytest
- integrate with VSCode to display cmdlog in GUI
- support NVMe over TCP targets
- doc: <https://pynvme.readthedocs.io/>

# ioworker: Parameters

## Input Parameters:

- lba\_start, lba\_step, lba\_align
- lba\_random
- region\_start, region\_end
- distribution
- io\_size (int, range, list, dict)
- read\_percentage, **op\_percentage**
- time, io\_count
- qdepth, qprio
- pvalue, ptype
- **iops**
- ...

## Output Parameters:

- io\_count\_read
- io\_count\_write, io\_count\_nonread
- mseconds
- latency\_max\_us
- latency\_average\_us
- error
- cpu\_usage
- output\_io\_per\_second (optional)
- output\_percentile\_latency (optional)
- output\_cmdlog\_list (optional)
- ...

```

# ioworker: Gallery

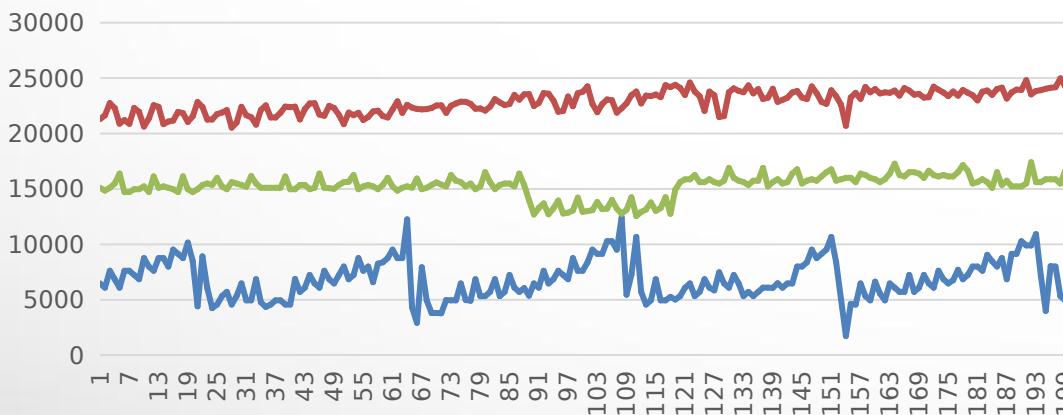

sequential write 1st pass (x: second, y: B/s)

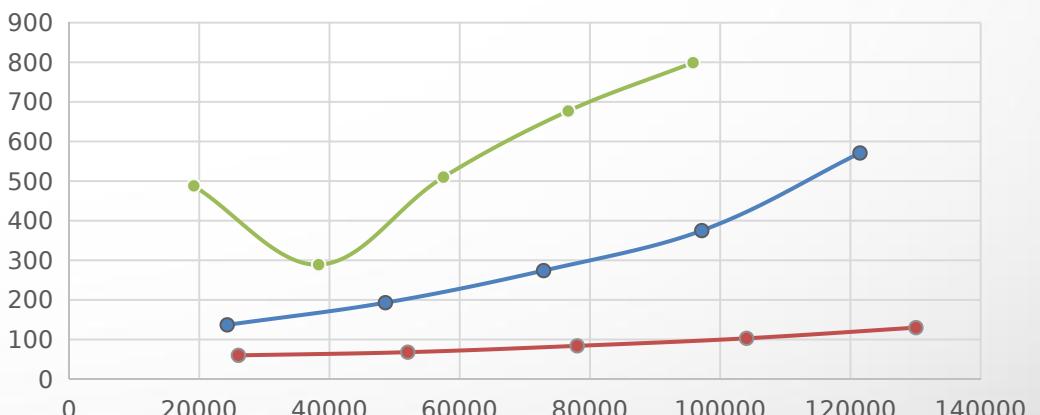

sequential write 3rd pass (x: second, y: B/s)

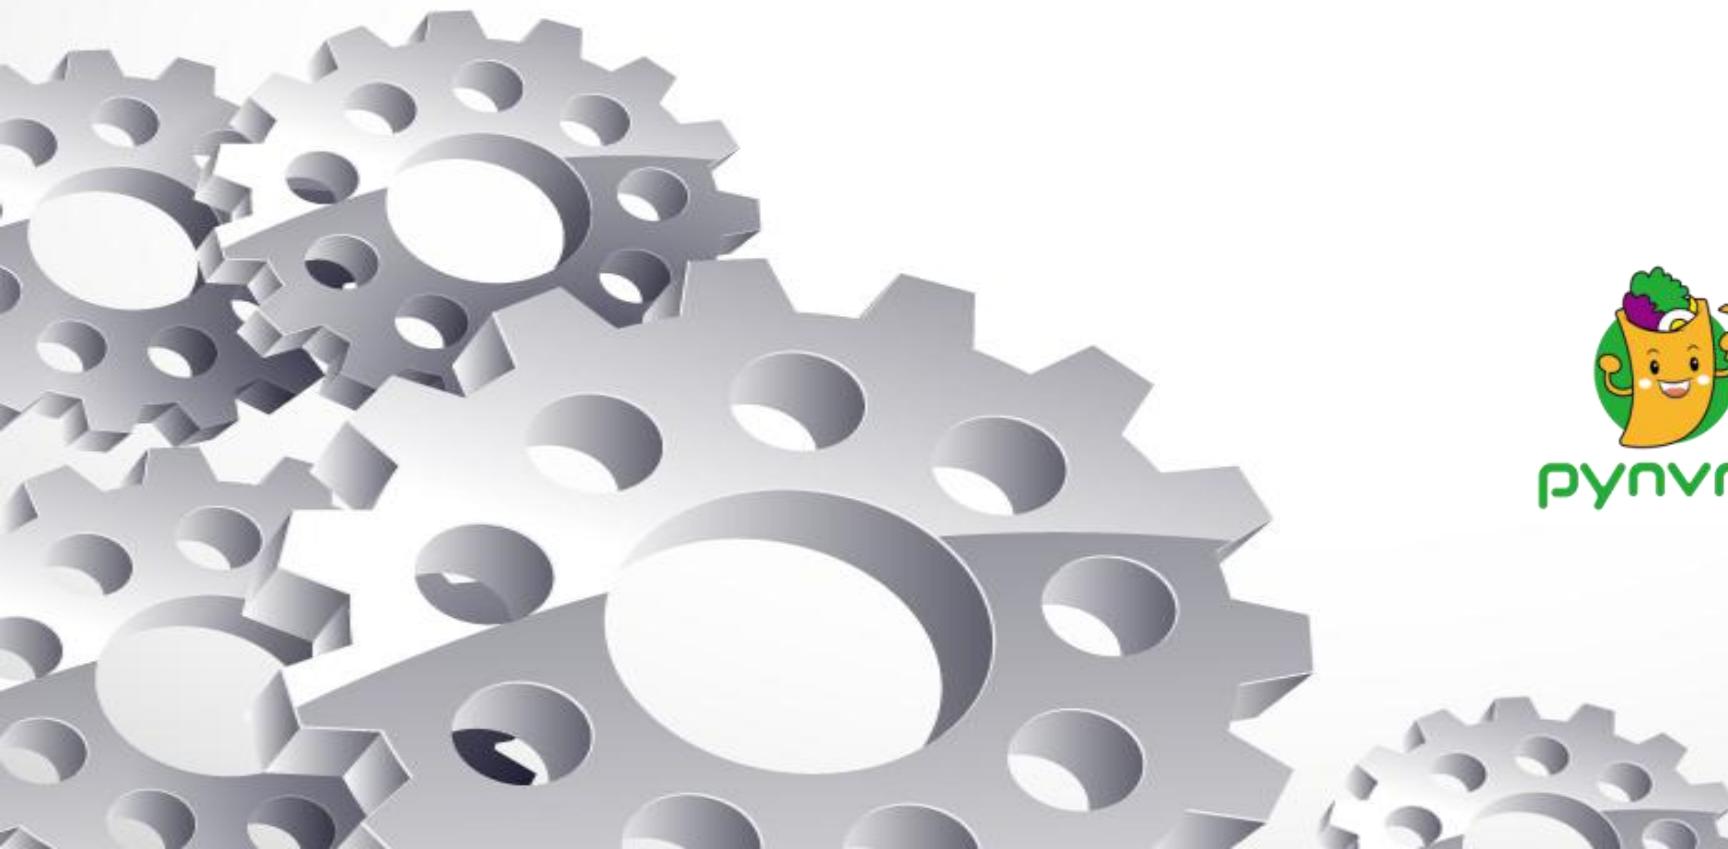

4K random write (x: second, y: IOPS)

latency against IOPS, 2R1W (x: IOPS, y: us)

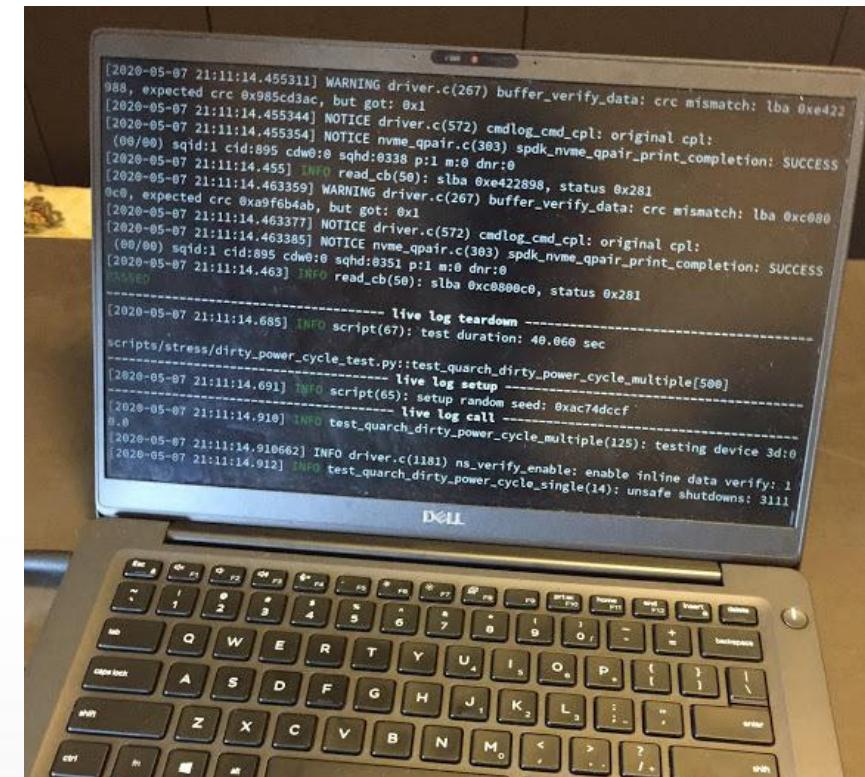

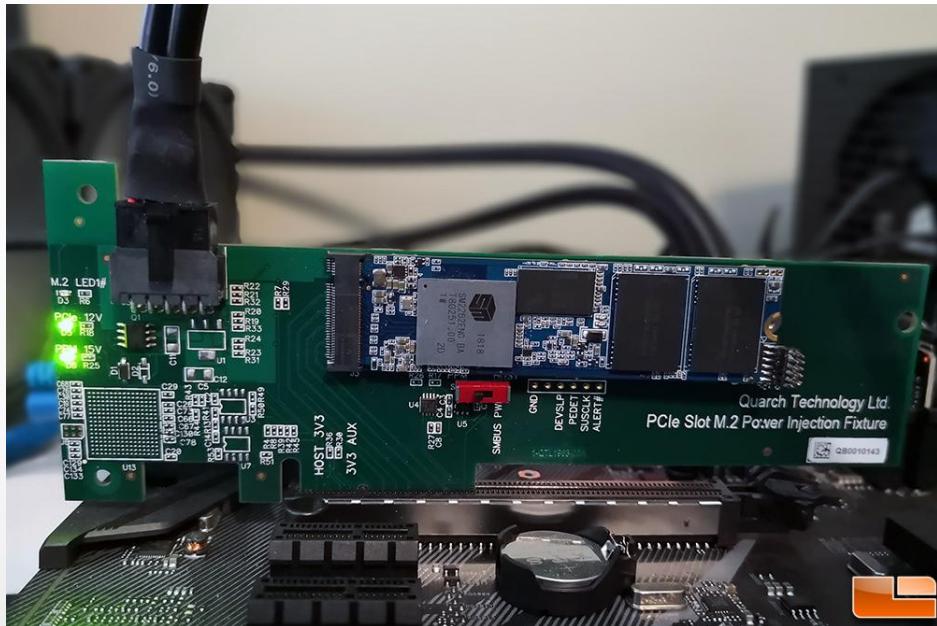

# Features

pynvme builds your own tests.

# vPower to ON and OFF

- Usually we need a special hardware box to control the power of SSD
- vPower controls the power of SSD:
  - power off: enter S3/sleep mode
  - power on: wake up by RTC

# vAnalyzer
